

# **RingStor Cloud – Change Local Backup Destination**

Local backup destination is used by DataAgent to save backup data. This location can be an local folder or UNC path provided DataAgent has full access to the location.

An example of local backup destination for a file backup is shown below in blue box:

oneip	Recovery
Datas	Set
Da	itaAgent: rswin7
Da	itaSet: file local 1
Ba	ickup Mode: Local Backup
Back	ıp Types
0	Full 💿 Incremental 🔘 Differential
Selec	t Backup Data Storage
۲	Local Backup to DataAgent
0	Online Backup to Cloud
F to b	or first backup of large DataSet, you may backup to local disk create a base line, import the backup to cloud to save andwidth and backup time.

Repli	ckup to this folder for all local backups on DataAgent 192.168.0.104\ringstor x: c:\mydata, \\myserver\sharedpath cation Local backup will be imported to cloud later Replicate backup to: Delete local backup after replication is completed if checked, data can only be restored from cloud

## Please follow steps below to change the local backup destination:

#### 1. Make sure no local backup is running on DataAgent

Local backup will constantly read and write to this destination.

Note: If needed, please disable backup schedules so no backup will be kicked off while this change is taking place.

#### 2. Configure NEW local backup destination

From RingStor Explorer, open DataAgent's Properties screen, click Settings tab:

General   Updates   Se	ungs License	
Review or modify Da	ataAgent runtime paramete	er
Property	Value	Descrip *
enabletabservice	1	Systray i
excluderesendfullfil	*.ost	Never se
ftpserverenabled	0	Replicat
fullfilethreshold	7	Number
incrementdownloa	1	Restore
indexfilesizemb	20	Max size
indexfolder		Location
localbackupfolder	\\192.168.0.104\ringstor	Location
localbackupversions	2	Number
localmaxstreams	0	Max num
maxchannels	2	Max num 🚽
۰ III		
Save	Cancel	

Click the cell to modify the local backup destination, then click Save button.

The new destination will be sent to DataAgent within a couple of minutes.

### 3. Move existing local backup data to new destination

On DataAgent, use Windows Explorer to move all backup folders to new destination.

For example, the old local backup folder is c drive, new destination is <u>\\server\path</u>:

Then move c:\<dataset id> to <u>\\server\path\<dataset</u> id>

Move all existing local backup data to new destination.

#### 4. Enable backup schedules if they are disabled in step 1
